

Operation

Diarrhoea results in dehydration and acidosis, causing calves to lose their appetite and drink less. Sodium bicarbonate acts as a buffer against acidosis (pH) and encourages the calf to drink more.

Instructions for use and dosage

- 1 bolus per calf at the first signs of diarrhoea. Repeat 1 bolus after the following three feedings.
- Administer using a suitable bolus applicator.
- It is recommended that a veterinarian's or nutritionist's opinion be sought before use.

it's about details

Bica

Mineral feed in the form of a bolus for oral administration.

20 x 15 g

Storage instructions

Keep product cool, dry and out of reach of children. Protect against frost.
