## Diarrhoea in calves

Diarrhoea is an often occurring health issue in young calves. It is a result of digestive disorders and can have a variety of causes, like nutritional mistakes (low quality, incorrect temperature of milk replacer), overfeeding or abrupt diet changes. However, diarrhoea is usually caused by a virus, bacterium, or parasite. Examples include E. coli, Rota and Corona viruses, Cryptosporidium, Coccidiosis and Salmonella.

In all cases, the calf loses a lot of moisture, electrolytes and energy. Also, the calf is at risk of acidification (pH drop) of the blood, because buffering agents are lost. These problems result in dehydration, weight loss and growth retardation. In case of serious diarrhoea, the calf may even die. It is, therefore, of utmost importance to treat calves suffering from diarrhoea as soon and as effectively as possible.

## Topro Top Fizz

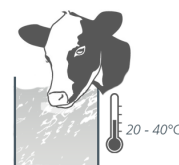

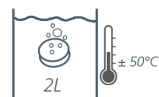

Topro Top Fizz is a dietetic supplementary feed in the form of an effervescent tablet, especially developed to stabilize the water and electrolytes balance.

The advantages of Top Fizz are:

- Can be used in case of risk of digestive disorders (diarrhoea), during and after such disorders;
- Offers immediately available energy in the form of lactose and dextrose;
- Stabilizes the water and electrolytes balance;
- Contributes to prevention of dehydration;
- Supports the intestinal flora;
- Decreases the risk of acidification of intestinal flora and blood pH.

## Dosage

Dissolve one tablet in 2 litres of lukewarm water (approximately 50 °C) at each meal. Repeat during two to three days. Simultaneous feeding of milk should be avoided in animals with Abomasum.

## Product characteristics

Lactose en dextrose	Provide direct energy and are required to stimulate water and feed intake.
Electrolytes	Replenish shortage immediately. Stabilizes and restores the water and electrolytes balance.
Sodium bicarbonate	Prevents acidification and stimulates water intake.
Vanilla	Improves the palatability.
